

Step into a Safe Facility.

Every year accidents occur because of accidental spray or splash from solvents, acids, flying debris or other hazardous material. Medical claims costs, insurance rates and lost time productivity costs add up each time you have an accident.

BRADLEYCORP.COM

Emergency safety showers and eyewashes prevent permanent eye and skin damage from chemical burns or foreign substances generated by grinding, hammering, chipping, testing, pouring, storing, transporting and disposing operations.

Halo™ eye or eye/face washes surround you with the fastest, most effective washdown coverage for your face of any model on the market!

Important information about compliance

The U.S. Code of Federal Regulations 29CFR 1910.151 states:

“Where the eyes or body of any person may be exposed to injurious or corrosive materials, suitable facilities for quick drenching or flushing of the eyes and body shall be provided within the work area for immediate emergency use.”

The American National Standards Institute (ANSI) establishes standards for minimum performance and use requirements for eyewash and shower equipment.

The ANSI Z358.1 for Emergency Eyewash and Shower Equipment provides detailed guidelines to which OSHA, State OSHA and other regulatory agencies commonly refer.

Canadian Provincial authorities also typically refer to ANSI standards when auditing for or advising proper requirements for emergency eyewash/showers.

It is well known that workers' compensation claims cost thousands upon thousands of dollars and add up quickly...

Are your safety fixtures...

- ✓ Properly located and equipped with appropriate options?
- ✓ Properly serviced and free of debris?
- ✓ Providing compliant water temperature?
- ✓ Meeting ANSI standards, including annual inspections?

BRADLEY CAN HELP.

It's difficult to keep up with changing safety regulations especially when your employees are asked to do more with less. Bradley's evaluation will assist your employees in meeting ANSI standards for emergency shower & eyewash safety. If you are planning to expand, relocate or even downsize work processes, you will want to take advantage of our complimentary confidential evaluation:

- 1 Our Safety Professionals act as a key supplemental resource to plant or multi-plant safety programs and processes.
- 2 Walk throughs include additional compliance suggestions on products and strategies to help employees recognize and correct potentially unsafe conditions.
- 3 On-site, hands-on inspection and training with those responsible for workplace safety.
- 4 Contains several components including customized checklists, reference materials, measuring tools and other resources as required.
- 5 Training and survey helps personnel respond appropriately in the event of an emergency and you'll receive a comprehensive training guide to help maintain your safety equipment.

Areas highlighted in yellow are highly recommended to have an emergency eyewash station

“We had new eyewash stations alongside 20-year-old units and weren’t sure if we met up-to-date requirements. Bradley assessed our entire facility, made some upgrade suggestions and helped train our safety staff. Many of our eyewash units weren’t even theirs and it didn’t cost me a dime!”

New York Utility

Components Safety Officer

“After one of our severely exposed workers was unable to stay in the shower for the full 15 minutes because of our near freezing water supply, we asked Bradley to suggest a temperature-controlled system and perform a full-blown plant survey. We just didn’t have the expertise or the staff to do it ourselves and we were impressed with the results.”

Northeastern Abrasive

Products Manufacturer

“Our lab work spaces were relocated several times during the last few years and, due to staff turnover, we were not keeping up with relocating and adding emergency flushing fountains. We were concerned about a potential accident so we asked Bradley to help us reconfigure our existing units. They recommended a phased-in plan that fit our budget.”
